GRIFFOLYN® GREENHOUSE COVERS

Reef Industries manufactures reinforced, cross-laminated polyethylene plastic films ideal for greenhouse applications. Our patented Griffolyn® Greenhouse Covers have superior strength and provide protection against snow, harsh winds and unwanted light transmission.

Our patented Griffolyn® Greenhouse Covers are manufactured using a UV stabilizing additive to protect your investments from UV radiation, whereby protecting the cover's properties and helping it retain its original color. This additive composition is consistent throughout the entire product to protect it from degradation during extended exposure to sunlight, to promote long life and extended use. Griffolyn® Greenhouse covers have a very long life expectancy, allowing significant cost savings through reuse and fewer replacements.

Griffolyn®'s 3-ply laminate combines 2 layers of linear low density polyethylene and a high strength cord grid to provide extreme tear resistance, durability and strength. Griffolyn® Covers will not rip, tear or fray. They are seam welded, thereby reducing seam leakage.

Griffolyn® Greenhouse Covers are available in clear to transmit 80% diffused light, white for 20% light transmission or black for nearly 0% light transmission. Griffolyn® Greenhouse Covers can be custom fabricated to meet your exact specifications. Additional features such as grommets and pipe loops are available to meet your installation needs.

You can apply Griffolyn® Greenhouse Covers over your existing structure in just a matter of minutes. For more information on how Reef Industries can help you protect your investments, please contact us or visit our website www.reefindustries.com.
