GRIFFOLYN® VAPOR RETARDER SYSTEM

Reef Industries' Griffolyn® Vapor Retarder System can stop moisture infiltration from causing poor insulation performance, structural damage and other moisture-related problems. The Griffolyn® Vapor Protection System consist of several high performance polyethylene or linear low density polyethylene all of which are reinforced with a patented heavy-duty polyester cord grid for superior strength, eliminating punctures and tears associated with installation. Griffolyn® vapor retarder's low permeance keeps moisture from infiltrating slabs and damaging floors while preventing costly structural corrosion, staining, mold and mildew growth and damaged insulation. Reef Industries offers a complete line of vapor retarders, pipe boots and seaming tapes for total moisture infiltration control.
